A pair of electrodes is the key item to generate arc discharge for fiber splicing. The ELCT series is the exclusive electrodes for Fujikura Arc Fusion Splicers.

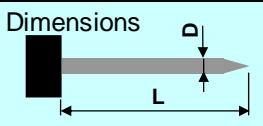

In order to perform Fujikura Splicers properly and completely, the genuine electrodes shall be utilized.

Several types of the ELCT series are prepared for each model of Splicer.

It is recommended to replace the electrodes with fresh pair in every 1,000 counts of arc discharge.

The ELCT series is supplied with a pair, for the anode and the cathode respectively.
