

VariStrip™ Series

All-in-One Wire Stripping

Innovative spring-loaded bushings to end-strip multiple Al or Cu wires with a single bushing. Strip any #2-750MCM THHN / XHHW wire with just 8 VariStrip bushings.

Never hear “forget it, I’ll just use my knife” on a jobsite again.

The VariStrip™ Series US21-7200 featuring Ripley’s patent-pending VariStrip technology is the first ever kit to safely and cleanly strip any copper or aluminum conductor THHN / XHHW-type wires from #2 AWG to 400 MCM AWG using just 5 variable bushings. Larger bushings up to 750 MCM AWG are also available for custom kits.

Traditional bushings must be precisely sized to each wire to be effective, while each VariStrip bushing is designed to strip a variety of jacket thicknesses over a range of wire gauges. A comparable kit needs 20 or more bushings to match the capacity of these 5. Ripley’s VariStrip kits work with any drill driver to save time and money compared to competitive products.

Developed to solve electrical contractors’ challenges with traditional bushings, VariStrip kits allow for maximum flexibility in wire stripping without sacrificing the clean cut professionals demand.

Features

- Patent-pending bushing design uses a spring-loaded ramp to accommodate various cable diameters in one size
- Drill adaptable tool body available with integrated strip stop for controlled and repeatable 0.5” - 3” strip length
- Patented quick-change collar for efficient and fast substitution of bushings, even while wearing gloves
- Color coded for easy size identification
- Durable aluminum and reinforced polymer construction
- Rugged and sharp precision cutting blade
- Increases safety by eliminating the use of traditional knives, reducing the risk of cuts or lacerations
- Contact Ripley for other sizes not listed. Bushings and tool also available individually
